Skills and Expertise

- Learning and Development
- Attention to Detail
- Effective Communication
- Research Skills
- Cybersecurity

Project Details

Deep fake Detection using Convolutional Neural Network (CNN) and GAN (Generative Adversarial Network)

- Collaborated with a colleague and a lecturer for my final year project to work on a system that helps to fake image using CNN and GAN which are Artificial Intelligence and Machine Learning Models.

Student Attendance using biometrics

- Worked on a Web application for Student Attendance using biometrics (fingerprint) by employing some computer programming languages like C# and MySQL.

Optimized Solar Powered Battery for Home Appliances

- Collaborated with some colleagues in implementing a solar powered car battery that helps to optimize performance across board and for multipurpose use.

Training

Graduate Trainee at SAIL Innovation Lab, Ebute, Ikorodu, Lagos.

- Created clone of the meta.com, coolors.com, piggyvest.com website and also made in responsive of mobile for access by employing HTML and CSS.
- Created a simple calculator that helps in computing using HTML, CSS and JS.
- Worked on frontendmentor.io challenges that helps developers to maximize their skills.
- All available in my GitHub repository above.
